

OPEN Template: Design – Program Logic Template

Name of program: _____ Logic Model (Left to right)

Objective:	Rationale / Problem Statement: <i>What is the underlying issue that you are trying to address? Who is affected by it? What are the root causes of the issue? The problem statement should be targeted and specific, but not simply state the need for your program.</i>
-------------------	--

Assumptions
 What unexamined beliefs do you have about how or why the program will work? This could include assumptions about the participants, engagement, activities, etc.

External Factors
 External factors: What is outside your control but will impact your program? Programs are situated in political, social, cultural and geographic environments that influence program delivery and outcomes.

The objectives, situation, rationale/problem statement, assumptions and external factors set the scene to understand the environment, drivers, intent and beliefs underpinning the program. By making them explicit they can later be examined.
